Roy,  
Looks to me like the applicant did not send in a new paper copy of the sequences when they sent in a new CRF with 407 SEQ ID #'s.

Options:

- Applicant can FAX you the new paper copy with 407 sequences.
- Applicant can decide to use the old CRF and then the paper copy already in the case would be OK. We have the original CRF with 265 sequences and we could send that to the printer. If you choose this option. Tell the printer to ask me for the original submission with 265 sequences.

Thanks,  
Mark

Mark,

I received an allowed case back because the paper copy of the sequence listing has 265 sequences and the electronic copy received has 407 sequences. The note attached to the application says to see you for assistance. What now? Thanks.

Make sure that whatever option the applicant chooses squares with what is in the application. They can't choose to have a sequence listing with 265 sequences when there are 407 valid sequences in the application.

O.K., I'll call applicant and see what they want to do. Thanks.
